

# Campus Improvements

## CB's teachers and students can take the heat

thanks to the completion of phase two of the air conditioning project. Last summer's phase one replaced the old single-pane windows with energy-efficient dual pane windows and added air conditioning to the second floor classrooms in the school's original wings. This summer finalized installation in the lower classrooms and the cafeteria. The upgrades allow for more comfortable conditions on hot days and make it possible to completely stop using the antiquated and inefficient boiler system.

With the new field house nearing completion, construction crews were able to redesign and improve the school's rear parking area to allow for a much more efficient flow of traffic and additional parking spaces.
